Forschungsziele

Glycin

Histidin
(Lysin
Glutaminsäure)

01

→ Titrations
kurve →

pH-Wert vs. zugegebenem
NaOH-Volumen

02

→ pK_s -Werte →

Punkte mit größter
Pufferwirkung

03

→ IEP = pI →

Nach außen hin neutral

Erwartete Ergebnisse

Glycin

pK_1 & pK_2

$$pk_1 \approx 2.34$$

$$pk_2 \approx 9.60$$

Isoelektrischer
Punkt

$$\frac{pk_1 + pk_2}{2} \approx 5.97$$

Unsere Ergebnisse

Glycin

$$pK_1 (2.34) = 2.44$$

$$pK_2 (9.6) = 9.39$$

Isoelektrischer
Punkt (5.97)

$$\frac{pK_1 + pK_2}{2} = 5.92$$

$$\text{Schnittpunkt} = 6.8$$

Ableitungen der Kurve Glycin

Erwartete Ergebnisse

Histidin

pK_1 & pK_2 & pK_3

$$pK_1 = 1.82$$

$$pK_2 = 9.17$$

$$pK_3 = 6.00 \text{ (auch oft } pK_R)$$

Isoelektrischer
Punkt

$$pI = 7.59$$

Histidin

Pufferfunktion

Kurve mit 3 Stufen
 pK_R -Wert nahe am
neutralen Bereich

Unsere Ergebnisse

Histidin

$$\begin{aligned} \text{pk}_1 (1.82) &= 1.7 \\ \text{pk}_2 (9.17) &= 9.37 \\ \text{pk}_3 (6) &= 6.22 \end{aligned}$$

Isoelektrischer
Punkt (7.59)

$$\begin{aligned} \frac{\text{pk}_3 + \text{pk}_2}{2} \\ = 7.8 \end{aligned}$$

Unsere Ergebnisse

Histidin

$pK_1 (1.82) = 1.7$
 $pK_2 (9.17) = 9.37$
 $pK_3 (6) = 6.22$

Isoelektrischer
Punkt (7.59)

Schnittpunkt
= 7.46

Unsere Ergebnisse

Histidin

$$\begin{aligned} \text{pk}_1 (1.82) &= 1.7 \\ \text{pk}_2 (9.17) &= 9.37 \\ \text{pk}_3 (6) &= 6.22 \end{aligned}$$

Isoelektrischer
Punkt (7.59)

Wendepunkt
= 7.64

Unsere Ergebnisse

Berechnungsmethoden IEP
